A digital health project for people with spinal muscular atrophy (SMA)

For more independence and security
in your daily life

Become a pioneer of these technologies and help us shape them to your needs!

What are we talking about?

A clinical research project for people with spinal muscular atrophy (SMA) to test innovative home and travel safety and health solutions.

What are the objectives?

- Improve monitoring of the health status and disease progression of people with SMA
- To help these people live independently and feel more secure
- Continuously measure and monitor certain health and behavioral data (respiratory rate, heart rate, speed of movement, etc.).

Conduct of the study

6 months at home

Watch (if possible) and connected objects installed in your home + mobile application

Questionnaire on your health status

Data collection and behavioral trends

You can participate if...

You have SMA and you are in a wheelchair

You are 10 years and older

You can use a cell phone (smartphone)

You speak and read French and/or German

PM-04-24-LEN_V2
